

José Victor Xavier Camacho

Data Engineer

Profile

Hello, I'm a data engineer with experience in AWS and Hadoop and data pipeline development. My experience includes designing, implementing, and optimizing data pipelines.

I have strong skills in Big Data technologies, including Hadoop, PySpark, Hive, AWS Glue, AWS Athena, and AWS S3, as well as experience in dealing with relational and non-relational databases. I am highly skilled in developing and implementing ETL processes and workflow automation to provide scalable and high-quality solutions.

Data Engineer at GFT
may 2024 — present

- Responsible for deploying Batch and Streaming data pipelines using terraform and Github Actions.
- Responsible for democratizing over 60 AWS accounts of the client and over 200 tables to the Data mesh.
- Responsible for creating a terraform template for glue jobs to ingest historical data of DynamoDb tables.
- Worked together with multiple squads to implement terraform templates to democratize data to the Data Mesh
- Deployed multiple pipelines for ingestions via Lambda and Snapshots of multiple instances of RDS.

Main technologies, tools, and methodologies used:

- Terraform
- CI/CD, GitHub Actions
- AWS (Glue, Firehose, Lambda, Step functions,)
- NoSQL (DynamoDB)
- SQL (Postgres, Mysql, Aurora)
- Unit Testing (Pytest)

Data Engineer at Tata Consultancy Services, Londrina
july 2022 — april 2024

- Responsible for migrating routines from SQL Server 2008 and SAS to the Hadoop environment (EC2 + EMR), converting procedures that were in a transactional environment to pipelines built from workflows orchestrated by Oozie and ETL scripts built in HIVEQL.
- Migration of ETL/ELT processes that were in processes coordinated by Python code (On-premises) to the Hadoop environment (AWS).
- Participation in the design and creation of data pipelines in the Hadoop environment, responsible for processing data that comprises

more than 10 KPIs from 7 different departments, which were previously calculated through manual processes (Excel).

- Saved 940 hours/year in processing by migrating routines from the on-premises environment to the Hadoop environment.
- Migration of processes from the Hadoop environment to the AWS environment, migrating ETLs done in Hive to AWS Glue with PySpark.

Main technologies, tools, and methodologies used:

- Scrum e Kanban
- Alteryx (ETL)
- Hadoop (Hive, Pyspark, Oozie, Cloudera)
- AWS (S3, Glue, Athena)
- SQL Server
- Python (Alteryx, Pandas, Numpy)

Intern at Tata Consultancy Services, Londrina
march 2022 — june 2022

Education

Bachelor's Degree, Federal Technological University of Paraná, Cornélio Procópio

Computer Engineering.

- 3rd Place XIII Idea Fair
October 2019

During my academic education in Computer Engineering at the Federal Technological University of Paraná, I had the opportunity to participate in the XIII Idea Fair, promoted by the institution, where my idea "NoQueue" was awarded 3rd place during the event.

Courses

SQL, Hacker Rank
2022

Python, Coding Game
2022

Coding Game - Coding Speed - Legend
2023

AWS Certified Cloud Practitioner
2023
